Set Default Parameter

To restore Factory Default Configuration, scan the appropriate barcode below.

Factory Default Configuration

Interval Time

The interval time between two readings in continuous mode. Regardless of the last success or failure to read, more than the specified time will automatically trigger the next reading.

Default: 500ms, unit: 100ms, range: 0-9900ms

To set a Interval Time, scan the barcode below. Next scan two *Numeric Barcodes* in the appendix that correspond to the desired time-out. Single digit values must have a leading zero. For example, to set a time-out of 0.5 seconds, scan the barcode below, then scan the "0" and "5" barcodes. To change the selection or cancel an incorrect entry, scan *Cancel* in the appendix.

Beeper Volume

To select a decode beep volume, scan the appropriate barcode.

2050801

Prefix/Suffix Values

A prefix and/or one or two suffixes can be appended to scan data for use in data editing. To set these values, scan a four-digit number (i.e. four barcodes) that corresponds to ASCII values. See the [Table 4-3](#) and [Numeric Barcodes](#) in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

✓ **NOTE** In order to use Prefix/Suffix values, the [Scan Data Transmission Format](#) must be set.

Scan Data Transmission Format

To change the Scan Data Transmission Format, scan one of the eight barcodes corresponding to the desired format.

Timeout Between Read

Timeout between reading another barcode, Default: 500ms, unit:100ms, range: 0-9900ms

3F30000002

Timeout Between Read

For example:

Set timeout between reads to 200ms.

Scan timeout between read barcode, then scan [Numeric Barcodes](#) 0 and 2.

Set timeout between reads to 1500ms.

Scan timeout between read barcode, then scan [Numeric Barcodes](#) 1 and 5.

Timeout Between Reading Same Barcode

To avoid reading the same barcode multiple times in continuous mode and automatic mode, set the scan engine to allow reading the same barcode after a delay.

Timeout between reading the same code is to refuse to read the same barcode within the set length of time. Default: 500ms,unit:100ms,range: 0-9900ms

To set timeout between reading the same code, scan the barcode below. Next scan two Numeric Barcodes in the appendix that correspond to the desired time-out. Single digit values must have a leading zero. For example, to set a time-out of 0.5 seconds, scan the barcode below, then scan the "0" and "5" barcodes. To change the selection or cancel an incorrect entry, scan Cancel in the appendix.

3F30000003
Timeout Between Reading Same Barcode

For example:

Set timeout between reading same barcode to 200ms

Scan timeout between reading same barcode, then scan [Numeric Barcodes](#) 0 and 2

Set output interval of the same code to 1500ms

Scan output interval of the same barcode,then scan [Numeric Barcodes](#) 1 and 5

1D reads two 1D barcodes

While scanning 1D barcodes, the scan engine reads two barcodes at the same time. There must be two barcodes too read at the same time otherwise reading fails (setting codes can still be read one at a time).

To enable or disable EAN-8, scan the appropriate barcode below.

Enable/Disable EAN-13

To enable or disable EAN-13, scan the appropriate barcode below.

Enable/Disable Bookland EAN(ISBN)

To enable or disable EAN Bookland, scan the appropriate barcode below.

Decode UPC/EAN Supplements

Supplements are barcodes appended according to specific format conventions (e.g.UPC A+2, UPC E+2, EAN 13+2, EAN 13+5). The following options are available:

- Do not read supplements – The scan engine can only read the barcode no matter the barcode with supplements or not.
- Only read the barcode with supplements- The scan engine can only read the barcode with supplements.
- Auto read supplements- The scan engine can not only read the barcode with supplements, but also read the barcode without supplements.

EAN-8 Zero Extend

When enabled, this parameter adds five leading zeros to decoded EAN-8 symbols to make them compatible in format to EAN-13 symbols.

Disable this parameter to transmit EAN-8 symbols as is.

Enable EAN-8 Zero Extend
(0x01)

*Disable EAN-8 Zero Extend
(0x00)

Bookland ISBN Format

If you enabled Bookland EAN using *Enable/Disable Bookland EAN*, select one of the following formats for Bookland data:

Bookland ISBN-10 - The scan engine reports Bookland data starting with 978 in traditional 10-digit format with the special Bookland check digit for backward-compatibility. Data starting with 979 is not considered Bookland in this mode.

Bookland ISBN-13 - The scan engine reports Bookland data (starting with either 978 or 979) as EAN-13 in 13-digit format to meet the 2007 ISBN-13 protocol.

*Bookland ISBN-10
(0x00)

NO2401
Bookland ISBN-13
(0x01)

✓ **NOTE** For Bookland EAN to function properly, first enable Bookland EAN using [Enable/Disable Bookland EAN](#), then select either Decode UPC/EAN Supplementals, Auto-discriminate UPC/EAN Supplementals, or Enable 978/979 Supplemental Mode in [Decode UPC/EAN Supplementals](#).

UPC/EAN Security Level

The scan engine offers four levels of decode security for UPC/EAN barcodes. Increasing levels of security are provided for decreasing levels of barcode quality. Increasing security decreases the scan engine's aggressiveness, so choose only that level of security necessary for the application.

UPC/EAN Security Level 0

This default setting allows the scan engine to operate in its most aggressive state, while providing sufficient security in decoding most "in-spec" UPC/EAN barcodes.

UPC/EAN Security Level 1

As barcode quality levels diminish, certain characters become prone to mis-decodes before others (i.e., 1, 2, 7, 8. If mis-decodes of poorly printed barcodes occur, and the mis-decodes are limited to these characters, select this security level.

UPC/EAN Security Level 2

If mis-decodes of poorly printed barcodes occur, and the mis-decodes are not limited to characters 1, 2, 7, and 8, select this security level.

2051102
UPC/EAN Security Level 2
(0x02)

UPC/EAN Security Level 3 UPC/EAN

If mis-decodes still occur after selecting Security Level 2, select this security level. Be advised, selecting this option is an extreme measure against mis-decoding severely out of spec barcodes. Selection of this level of security significantly impairs the decoding ability of the scan engine. If this level of security is necessary, try to improve the quality of the barcodes.

2051103
UPC/EAN Security Level 3 (0x03)

Code 128

Including AIM128 ,but the output type is different.

Enable/Disable Code 128

Enable/Disable ISBT 128

To enable or disable ISBT 128, scan the appropriate barcode below.

Lengths for Code 128

No length setting is required for Code 128.
没有要求Code 128的长度设置。

Code 39

Enable/Disable Code 39

To enable or disable Code 39, scan the appropriate barcode below.

Set Lengths for Code 39

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Lengths for Code 39 may be set for any length, one or two discrete lengths, or lengths within a specific range. If Code 39 Full ASCII is enabled, **Length Within a Range** or **Any Length** are the preferred options. To set lengths via serial commands, see [Setting Code Lengths Via Serial Commands](#).

✓ **NOTE** When setting lengths, single digit numbers must always be preceded by a leading zero.

One Discrete Length - This option limits decodes to only those Code 39 barcodes containing a selected length. Lengths are selected from the [Numeric Barcodes](#) in the appendix. For example, to decode only Code 39 symbols with 14 characters, scan **Code 39 - One Discrete Length**, then scan **1** followed by **4**. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Two Discrete Lengths - This option limits decodes to only those Code 39 symbols containing either of two selected lengths. Lengths are selected from the [Numeric Barcodes](#) in the appendix. For example, to decode only those Code 39 symbols containing either 2 or 14 characters, select **Code 39 - Two Discrete Lengths**, then scan **0**, **2**, **1**, and then **4**. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Length Within Range - This option limits decodes to only those Code 39 symbols within a specified range. For example, to decode Code 39 symbols containing between 4 and 12 characters, first scan **Code 39 - Length Within Range**. Then scan **0**, **4**, **1**, and **2** according to [Numeric Barcodes](#) in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Code 39 - Length Within Range

Any Length - Scan this option to decode Code 39 symbols containing any number of characters.

Code 39 - Any Length

Code 39 Check Digit Verification

When this feature is enabled, the scan engine checks the integrity of all Code 39 symbols to verify that the data complies with specified check digit algorithm. Only those Code 39 symbols which include a modulo 43 check digit are decoded. Only enable this feature if your Code 39 symbols contain a module 43 check digit.

Verify Code 39 Check Digit
(0x01)

*Do Not Verify Code 39 Check Digit
(0x00)

Transmit Code 39 Check Digit

Scan this symbol to transmit the check digit with the data.

Transmit Code 39 Check Digit (Enable)
(0x01)

Scan this symbol to transmit data without the check digit.

***Do Not Transmit Code 39 Check Digit (Disable)
(0x00)**

Enable/Disable Code 39 Full ASCII

Code 39 Full ASCII is a variant of Code 39 which pairs characters to encode the full ASCII character set. To enable or disable Code 39 Full ASCII, scan the appropriate barcode below.

See [Table 4-3](#) for the mapping of Code 39 characters to ASCII values.

**Enable Code 39 Full ASCII
(0x01)**

***Disable Code 39 Full ASCII
(0x00)**

✓ NOTE Trioptic Code 39 and Code 39 Full ASCII cannot be enabled simultaneously. If you get an error beep when enabling Code 39 Full ASCII, disable Trioptic Code 39 and try again.

Set Lengths for Code 93

The length of a code refers to the number of characters (i.e., human readable characters, including check digit(s) the code contains). Lengths for Code 93 may be set for any length, one or two discrete lengths, or lengths within a specific range. To set lengths via serial commands, see [Setting Code Lengths Via Serial Commands](#).

One Discrete Length - Select this option to decode only those codes containing a selected length. For example, select **Code 93 One Discrete Length**, then scan **1, 4**, to limit the decoding to only Code 93 symbols containing 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

F1010A0B023700011
Code 93 - One Discrete Length

Two Discrete Lengths - Select this option to decode only those codes containing two selected lengths. For example, select **Code 93 Two Discrete Lengths**, then scan **0, 2, 1, 4**, to limit the decoding to only Code 93 symbols containing 2 or 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

F2010A0B023700011
Code 93 - Two Discrete Lengths

Length Within Range - This option sets the unit to decode a code type within a specified range. For example, to decode Code 93 symbols containing between 4 and 12 characters, first scan **Code 93 Length Within Range**, then scan **0, 4, 1 and 2** (single digit numbers must always be preceded by a leading zero. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix..

Any Length - Scan this option to decode Code 93 symbols containing any number of characters.

Code 11

Enable/Disable Code 11

To enable or disable Code 11, scan the appropriate barcode below.

Set Lengths for Code 11

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Set lengths for Code 11 to any length, one or two discrete lengths, or lengths within a specific range.

One Discrete Length - Select this option to decode only Code 11 symbols containing a selected length. Select the length using the [Numeric Barcodes](#) in the appendix. For example, to decode only Code 11 symbols with 14 characters, scan **Code 11 - One Discrete Length**, then scan **1** followed by **4**. To correct an error or to change the selection, scan [Cancel](#) in the appendix.

Two Discrete Lengths - Select this option to decode only Code 11 symbols containing either of two selected

lengths. Select lengths using the [Numeric Barcodes](#) in the appendix. For example, to decode only those Code 11 symbols containing either 2 or 14 characters, select **Code 11 - Two Discrete Lengths**, then scan **0, 2, 1**, and then **4**. To correct an error or to change the selection, scan [Cancel](#) in the appendix.

Length Within Range - Select this option to decode a Code 11 symbol with a specific length range. Select lengths using the [Numeric Barcodes](#) in the appendix. For example, to decode Code 11 symbols containing between 4 and 12 characters, first scan **Code 11 - Length Within Range**. Then scan **0, 4, 1**, and **2** (single digit numbers must always be preceded by a leading zero). To correct an error or change the selection, scan [Cancel](#) in the appendix.

Any Length - Scan this option to decode Code 11 symbols containing any number of characters within the scan engine capability.

[Code 11 Check Digit Verification](#)

This feature allows the scan engine to check the integrity of all Code 11 symbols to verify that the data complies with the specified check digit algorithm. This selects the check digit mechanism for the decoded Code 11 barcode. The options are to check for one check digit, check for two check digits, or disable the feature.

To enable this feature, scan the barcode below corresponding to the number of check digits encoded in your Code 11 symbols.

2051200
*Disable
(0x00)

2051201
One Check Digit
(0x01)

2051202
Two Check Digits
(0x02)

Transmit Code 11 Check Digits

This feature selects whether or not to transmit the Code 11 check digit(s).

1020141
Transmit Code 11 Check Digit(s) (Enable)
(0x01)

1020140
*Do Not Transmit Code 11 Check Digit(s) (Disable)
(0x00)

✓ **NOTE** Code 11 Check Digit Verification must be enabled for this parameter to function.

Interleaved 2 of 5/ITF

Enable/Disable Interleaved 2 of 5

To enable or disable Interleaved 2 of 5, scan the appropriate barcode below.

Set Lengths for Interleaved 2 of 5

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Lengths for I 2 of 5 may be set for any length, one or two discrete lengths, or lengths within a specific range. To set lengths via serial commands, see [Setting Code Lengths Via Serial Commands](#).

✓ **NOTE** When setting lengths, single digit numbers must always be preceded by a leading zero.

One Discrete Length - Select this option to decode only those codes containing a selected length. For example, select **I 2 of 5 One Discrete Length**, then scan **1, 4**, to decode only I 2 of 5 symbols containing 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Two Discrete Lengths - Select this option to decode only those codes containing two selected lengths. For example, select **I 2 of 5 Two Discrete Lengths**, then scan **0, 6, 1, 4**, to decode only I 2 of 5 symbols containing 6 or 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

I 2 of 5 - Two Discrete Lengths

Length Within Range - Select this option to decode only codes within a specified range. For example, to decode I 2 of 5 symbols containing between 4 and 12 characters, first scan **I 2 of 5 Length Within Range**, then scan **0, 4, 1 and 2** (single digit numbers must always be preceded by a leading zero). *Numeric Barcodes* is in the appendix. To change the selection or cancel an incorrect entry, scan **Cancel** in the appendix.

Any Length - Scan this option to decode I 2 of 5 symbols containing any number of characters.
✓ **NOTE** Selecting this option may lead to mis-decodes for I 2 of 5 codes.

I 2 of 5 Check Digit Verification

When enabled, this parameter checks the integrity of an I 2 of 5 symbol to ensure it complies with a specified algorithm, either USS (Uniform Symbology Specification), or OPCC (Optical Product Code Council).

**OPCC Check Digit
(0x02)**

Transmit I 2 of 5 Check Digit

Scan this symbol to transmit the check digit with the data.

**Transmit I 2 of 5 Check Digit (Enable)
(0x01)**

Scan this symbol to transmit data without the check digit.

***Do Not Transmit I 2 of 5 Check Digit (Disable)
(0x00)**

Convert I 2 of 5 to EAN-13

This parameter converts a 14 character I 2 of 5 code into EAN-13, and transmits to the host as EAN-13. To accomplish this, I 2 of 5 must be enabled, one length must be set to 14, and the code must have a leading zero and a valid EAN-13 check digit.

**Convert I 2 of 5 to EAN-13 (Enable)
(0x01)**

***Do Not Convert I 2 of 5 to EAN-13 (Disable)
(0x00)**

Discrete 2 of 5/Industrial 2 of 5

Enable/Disable Discrete 2 of 5

To enable or disable Discrete 2 of 5, scan the appropriate barcode below.

Set Lengths for Discrete 2 of 5

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Lengths for D 2 of 5 may be set for any length, one or two discrete lengths, or lengths within a specific range. To set lengths via serial commands, see [Setting Code Lengths Via Serial Commands](#).

One Discrete Length - Select this option to decode only those codes containing a selected length. For example, select **D 2 of 5 One Discrete Length**, then scan **1, 4**, to decode only D 2 of 5 symbols containing 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Two Discrete Lengths - Select this option to decode only those codes containing two selected lengths. For example, select **D 2 of 5 Two Discrete Lengths**, then scan **0, 2, 1, 4**, to decode only D 2 of 5 symbols containing 2 or 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Length Within Range - Select this option to decode codes within a specified range. For example, to decode D 2 of 5 symbols containing between 4 and 12 characters, first scan **Discrete 2 of 5 Length Within Range**, then scan

0, 4, 1 and 2 (single digit numbers must be preceded by a leading zero). *Numeric Barcodes* is in the appendix. To change the selection or cancel an incorrect entry, scan *Cancel* in the appendix.

Any Length - Scan this option to decode Discrete 2 of 5 symbols containing any number of characters.

✓ **NOTE** Selecting this option may lead to mis-decodes for Discrete 2 of 5 codes.

Codabar

Enable/Disable Codabar

To enable or disable Codabar, scan the appropriate barcode below.

Set Lengths for Codabar

The length of a code refers to the number of characters (i.e., human readable characters), including check digit(s) the code contains. Lengths for Codabar may be set for any length, one or two discrete lengths, or lengths within a specific range. To set lengths via serial commands, see [Setting Code Lengths Via Serial Commands](#).

One Discrete Length - Select this option to decode only those codes containing a selected length. For example, select **Codabar One Discrete Length**, then scan **1, 4**, to decode only Codabar symbols containing 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Two Discrete Lengths - This option sets the unit to decode only those codes containing two selected lengths. For example, select **Codabar Two Discrete Lengths**, then scan **0, 2, 1, 4**, to decode only Codabar symbols containing 6 or 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Length Within Range - Select this option to decode a code within a specified range. For example, to decode Codabar symbols containing between 4 and 12 characters, first scan **Codabar Length Within Range**, then scan **0, 4**,

1 and **2** (single digit numbers must always be preceded by a leading zero). *Numeric Barcodes* is in the appendix. To change the selection or cancel an incorrect entry, scan *Cancel* in the appendix.

Codabar - Length Within Range

Any Length - Scan this option to decode Codabar symbols containing any number of characters.

MSI/MSI PLESSEY

Enable/Disable MSI

To enable or disable MSI, scan the appropriate barcode below.

Set Lengths for MSI

The length of a code refers to the number of characters (i.e., human readable characters) the code contains, and includes check digits. Lengths for MSI can be set for any length, one or two discrete lengths, or lengths within a

specific range. See [Table 4-3](#) for ASCII equivalents. To set lengths via serial commands, see [Setting Code Lengths Via Serial Commands](#).

One Discrete Length - Select this option to decode only those codes containing a selected length. For example, select **MSI Plessey One Discrete Length**, then scan **1, 4**, to decode only MSI Plessey symbols containing 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Two Discrete Lengths - Select this option to decode only those codes containing two selected lengths. For example, select **MSI Plessey Two Discrete Lengths**, then scan **0, 6, 1, 4**, to decode only MSI Plessey symbols containing 6 or 14 characters. [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Length Within Range - Select this option to decode codes within a specified range. For example, to decode MSI symbols containing between 4 and 12 characters, first scan **MSI Length Within Range**, then scan **0, 4, 1 and 2** (single digit numbers must always be preceded by a leading zero). [Numeric Barcodes](#) is in the appendix. To change the selection or cancel an incorrect entry, scan [Cancel](#) in the appendix.

Any Length - Scan this option to decode MSI Plessey symbols containing any number of characters.
✓ **NOTE** Selecting this option may lead to mis-decodes for MSI codes.

MSI Check Digits

These check digits at the end of the barcode verify the integrity of the data. At least one check digit is always required. Check digits are not automatically transmitted with the data.

If two check digits are selected, also select an [MSI Check Digit Algorithm](#).

Transmit MSI Check Digit

Scan this symbol to transmit the check digit with the data.

Scan this symbol to transmit data without the check digit.

MSI Check Digit Algorithm

When the Two MSI check digits option is selected, an additional verification is required to ensure integrity. Select one of the following algorithms.
